2 Theorems and definitions

There are two types of theorem environments, one is with background color, the other is without background color. The following is a list of theorem environments supported by this template:

Definition 1 (this is a definition). test

Proposition 2 (this is a proposition). test

Proof. This is a proof environment, it is used to prove theorems, propositions, lemmas, corollaries, etc. We allow to use step environments inside the proof environment, such as:

Step 1. This is a step environment, it is used to break down the proof into smaller steps.

Step 2. This is another step environment, it is used to break down the proof into smaller steps.

And the step environment should be used inside the proof environment. The proof environment will automatically end with a square box. \square

Theorem 3 (this is a theorem). test

Proof. This is a proof environment. The step environment is labelled in the proof environment. A new proof environment will refresh the step environment counter.

Step 1. Goal 1.

Proof of Goal 1.

Step 2. Goal 2.

Proof of Goal 2.

Here we test the hyperlink to the step environment [Step 1](#).

You can also use the claim environment to make a claim in the proof environment, such as:

Claim 4. This is a claim environment, it is used to make a claim in the proof environment.

And the claim environment should be used inside the proof environment. \square

Proof of [Claim 4](#). This is a proof for the [Claim 4](#). Here we test the case environment.

Case 1. This is a case environment, it is used to break down the proof into smaller cases.

Case 2. This is another case environment, it is used to break down the proof into smaller cases.

And the case environment should be used inside the proof environment. \square

Lemma 5 (this is a lemma). test

Proof. Here we test case environment again.

Case 1. This is a case environment, it is used to break down the proof into smaller cases.

Case 2. This is another case environment, it is used to break down the proof into smaller cases. \square

Corollary 6 (this is a corollary). test

Question 7 (this is a question). test

- Conjecture 8 (this is a conjecture). test
- Example 9 (this is an example). test
- Exercise 10 (this is an exercise). test
- Remark 11 (this is a remark). test Here we test the hyperlink to the case environment [Case 1](#).
- this is a proof.* test □

3 sectionlevel=section

In this mode, the section is the highest level, and usually there is only one section in the document. There is no title page, no table of contents, and no cover image. All theorem and definition environments are labelled with a unique number, and the numbering is continuous throughout the document.
